NEW DVD: Dr. van Dijk LET'S TALK LIMBIC

295 NW Commons Loop, Ste., 115-312, Lake City, FL 32055, (407) 352-1200

Let's talk Limbic. The Role of the Emotional Brain in the Well Being of Persons with Multiple Sensory Impairment.

This DVD is on a major part of the human emotional brain, the 'Limbic System'. With very clear clips the authors show how sensory deprivation effects the person's emotional well being.

The authors explain in clear wordings which part of the Limbic System is involved in a particular behaviour e.g. attachment, anxiety and stress.

Clear examples are given of effective intervention by parents and significant others. The role of mirror neurons is demonstrated in 'the resonance phenomenon' and as a precursor for imitation.

This DVD is for the professional e.g. (supervising) teacher, program coordinator, psychologists and para-professionals who want to understand the deep emotional motives of a person with multiple sensory impairment.

Authors:

Dr. Jan van Dijk, Emeritus Professor Radboud University, Nijmegen.
